

Eagle Gift and List Registry allows you, the Retailer, to increase your online presence by offering expanded service to your customers.

Registrants and Consumers will easily access your website to create, modify and share wish or project lists.

In this course we will review the set up needed to begin and take a look at the administrative functions available within the Content and Site sections of your eCommerce pages.

As an iNet customer your website has already been configured for use. With the addition of the Gift and List Registry function there are some additional settings available.

Review the Setup document located in the course materials section for this Training on Demand class.

From the 'Content' tab you have the ability to alter the 'Carousel' for your Gift and List Registry landing page.

Here, you can add to the scrolling images and links that Consumers and Registrants will view when they browse to your site.

'List Carousel Items' will display those images or URL's that are already added. You can Delete an item or Edit it.

'Add Item' gives you the ability to provide a 'Title, 'URL' or 'Image', and some descriptive 'Text'.

Press 'Save', and the picture and text will be added to the boxes that move across the screen when someone navigates to your Registry site.

From the 'Site' tab, select 'Advanced' to view some areas that will need to be addressed prior to using your Gift and List Registry.

The Registry Settings provide you with the power to control additional aspects of your Gift and Registry site.

Hovering over each item provides a detailed explanation of its function.

Use the 'Value' field to determine if you want to 'Include Carousel on Landing Page', or 'Include Projects Link on Landing Page'.

You can 'Allow Gift Card Suggestion on Registry' if your store uses Gift Cards and customize the text that the Registrant and Consumer see.

Review each of the settings carefully. You can change them at any time so experiment with the available combinations.

Selecting 'Registry Types' allows you, the Retailer, to determine what options the Registrant has available when creating a list or project.

Simply change the Value field to 'No' to eliminate it from their choices or set it to 'Yes' to add it.

Press 'Save Changes' to enable the new Values.

Setting up your Eagle Gift and List Registry is familiar to iNet users with the organization of tabs and pages.

Again, changes can be made at any time and appear instantly so explore which ones work best for your business.

The Content tab and the Site tab are accessible to you from any PC or tablet.

Once the foundation is set you can begin using your customized web page and drawing in new Registrants and Consumers.
