

What's New in Propello 2023.1

Propello's release 2023.1 includes new features and enhancements that help simplify tasks and streamline workflows so you can focus on providing an exceptional customer experience.

Let's review the new features in *Price Review*, *Fixed Order Quantity*, *Change Log for Options*, and *Configuration changes*.

The improved *Price Review* screen provides an easy way to analyze information with *Grid enhancements*, *new columns and filters*, and an automated process.

Let's start with *Grid* improvements on the *Price Review* page.

In the *Price Review* grid, all item details appear in a single row for faster review.

The batch-saving function lets you make multiple changes at once.

To save every value at one time, use the new *Save* button.

To undo any grid changes, use the *Cancel* button.

You can use the new *View* filter to quickly display *all changes*, *cost updates*, or *price updates*. The new columns and associated filters allow you to perform better analysis in the grid.

Along with updating the item cost for the primary supplier, you can also edit the manufacturer's and alternate suppliers' prices.

Finalize Price Changes now includes these options: *Update Retail Only* and *Update Desired GP% Only*.

The new *Price Review Background Tasks* window displays when a task is running in the background, alerting you that you can resume using *Price Review* once the task completes.

Save time with the new *Copy & Paste values from one column to another* toggle.

When enabled, you can copy the price from a source column and paste it into a destination column while performing a batch price update

You can schedule the finalization process and define the price review parameters using the *Calendar* icon.

Then view the schedule details in the *Task Logs*.

Now, let's look at the new *Configuration Change History* feature.

Configuration Change History provides information on changes made to options and configuration settings, users who performed the changes, the old values before the change, and the new values after the changes.

With the *View By* filter, you can display specific changes in the grid, review the information, and easily export the details to Excel for further analysis.

Finally, you can check the *Fixed Order Quantity* available in the *Product Overview Buying* tab.

We added a new toggle button labeled *Use FOQ* on the *Suggested Orders* configuration page.

Enable this toggle to include the *Fixed Order Quantity* calculation while generating *Automated Purchase Orders*

With this release, the *Fixed Order Quantity* field is present on the *Purchase Order* page and the *Quick Item View* page.

Additionally, you can import Fixed order quantity values into the system using the product imports functionality.

Refer to the *What's New document* in the *Help* menu for a complete list of new features and enhancements in the latest Propello release.
